Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

...

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                       FACTORS AND INTERLEUKINS.
SUBGURIT: Homodimer (soluble isoform) (By similarity).
SUBCELLULAR LOCATION: Type I membrane protein. Two sol isoforms are also produced by alternative splicing. On isoform 3/E6, is biologically active, while the other, 4/E6Delta16, is inactive.
ALTERNATIVE PRODUCTS: 4 isoforms; 1/6C (shown here), 2 and 4/E6Delta15; are produced by alternative splicing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CELLS. FINITIONAL ASSOCIATION OF U2 SNRNP WITH THE ATP-INDEPENDENT ENDITIONS SUBUNITY OF THE SPLICING FACTOR SF3A REQUIRED FOR 'A'
CC --- FUNCTION: SUBUNITY OF THE SPLICING FACTOR SF3A REQUIRED FOR 'A'
CC COMPLEX ASSEMBLY FORMED BY THE STABLE BINDING OF U2 SNRNP TO THE BRANCHPOINT SEQUENCE (BPS) IN PRE-MRNA. SEQUENCE INDEPENDENT
CC BINDING OF SF3A/SF3B COMPLEX UPSTREAM OF THE BRANCH SITE IS
ESSENTIAL, IT MAY ANCHOR U2 SNRNP TO THE PRE-MRNA. MAY ALSO BE
CC INVOLVED IN THE ASSEMBLY OF THE 'E' COMPLEX.
CC --- SUBUNIT: COMPONENT OF SPLICING FACTOR SF3A WHICH IS COMPOSED OF THREE SUBUNITS: SF3A3/SAP61, SF3A2/SAP62, SF3A1/SAP114. SF3A
CC ASSOCIATES WITH THE SPLICING FACTOR SF3B AND A 12S RNA UNIT TO FORM THE U2 SMALL NUCLEAR RIBONUCLEOPROTEINS COMPLEX (U2 SNRNP).
CC --- TISSUE SPECIFICITY: UBICULTOUSLY EXPRESSED.
CC --- SUBULLARITY: TO YEAST PRE-MRNA SPLICING FACTOR PRE21.
CC --- SIMILARITY: TO YEAST PRE-MRNA SPLICING FACTOR PRE21.

                                                                                                                                                                                                                                                                                                                                                                                                                                                      -!- FUNCTION: THIS PROTEIN FUNCTIONS AS A DOSAGE-DEPENDENT INDUCER MITOTIC CONVENCE. IT IS A TYROSINE PROTEIN PHOSEHATASE REQUIRED PROGRESSION OF THE CELL CYCLE. IT MAY DIRECTLY DEPHOSPHORYLATE P34(CDC2) AND ACTIVATE THE P34(CDC2) KINASE ACTIVITY.
-!- CATALYTIC ACTIVITY: Protein tyrosine phosphate + H(2)0 = protein tyrosine + phosphate.
-!- SIMILARITY: BELONGS TO THE MPI PHOSPHATASE FAMILY.
-!- SIMILARITY: CONTAINS 1 RHODANESE DOMAIN.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match
                                                                                                                                                                                                           the developing brain.";

Proc. Natl. Acad. Sci. U.S.A. 91:1819-1823(1994).

-i- FUNCTION: MAY BE INVOLVED IN CELL-CELL INTERACTIONS AND RECOGNITION (BY SIMILARITY).

-i- CATALYTIC ACTIVITY: ATP + a protein tyrosine = ADP + protein tyrosine phosphate.

-i- SUBCELLULAR LOCATION: Type I membrane protein.

-i- TISSUE SPECIFICITY: VARIOUS EMBRYONIC AND ADULT TISSUES; ALSO PROLIFERATIVE ZONES OF THE DEVELOPING BRAIN; HIPPOCAMPAL NEURONS.

-I- SIMILARITY: WITH THE CONSERVED CATALYTIC DOMAINS OF TYR-PROTEIN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    DDR1_RAT STANDARD; PRT; 910 AA. 063474; 063474; 01-NOV-1997 (Rel. 35, Created) 01-NOV-1997 (Rel. 35, Last sequence update) 15-JUN-2002 (Rel. 41, Last annotation update) Epithelial discoidin domain receptor 1 precursor (EC 2.7.1.112) (Tyrosine-protein kinase CAK) (Cell adhesion kinase) (Tyrosine kinase DDR) (Discoidin receptor tyrosine kinase) (Protein-tyrosine kinase
